Proposed scope of a joint technical evaluation of extra-heavy oil development options

Confidential under the mutual NDA of 14 February 2026 (ATC-2026-0103)

Dear María Fernández,

Further to our clarification letter of 8 July 2026 (ATC-2026-0131) and your request of 30 June 2026 (PDO-PR-2026-088), we write to propose the scope of a joint technical evaluation of extra-heavy oil development options for one of your Orinoco Belt blocks.

The exchange proposed below falls within the mutual non-disclosure agreement in force between our companies since 14 February 2026 and expiring on 13 February 2028. Our screening of eight analogue fields indicates primary recovery of 6% to 12% of STOIP under cold production, and a steam-assisted case has the higher NPV10 in seven of the eight analogues on a USD 65 per barrel deck. We would treat both as starting points to be tested against your data, not as findings for your asset.

We propose three work packages: a data audit and review of the reservoir characterisation; a screening of cold, steam-assisted and hybrid development concepts; and an economic comparison of the concepts on a common price deck and fiscal basis. Before any number is issued we would agree in writing the data basis, including which data Alpha Technical Centre accepts as represented by Petrolera del Orinoco and which it has verified. Any activity would proceed only with the authorisations required under applicable sanctions and export-control regimes.

We would welcome a call in the week of 12 October to agree the scope and the data exchange. Please treat this letter as confidential under the agreement referred to above.

Yours sincerely,

Chris Hopkinson
